

## NOTES

When consider to make **organic and chemical fertilizers as solid or liquid**, there is a need for a good and usable formulation that will be guide every steps of production.

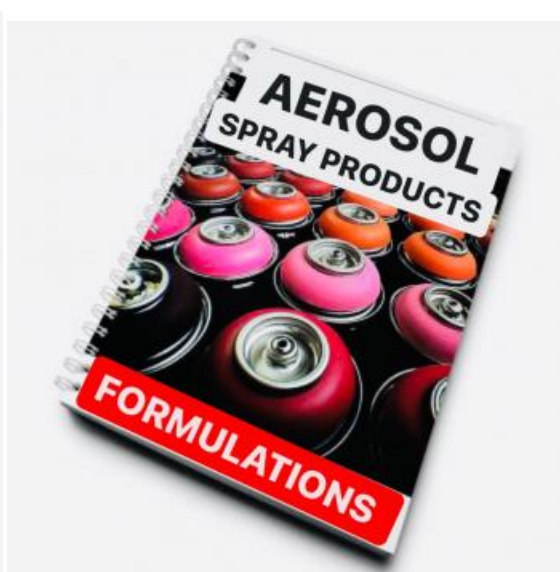

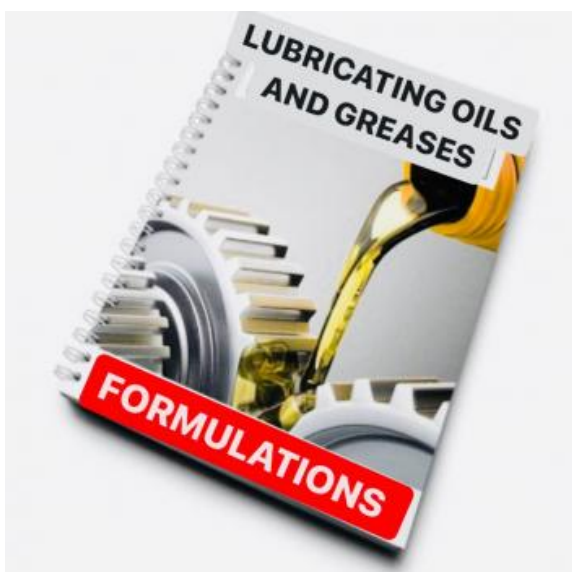

These formulations are needed in order to decide which chemicals and in what quantites should be used for **manufacturing of organic and chemical fertilizers**.

These formulations are explained in a simple language that everyone can understand and apply very easily.

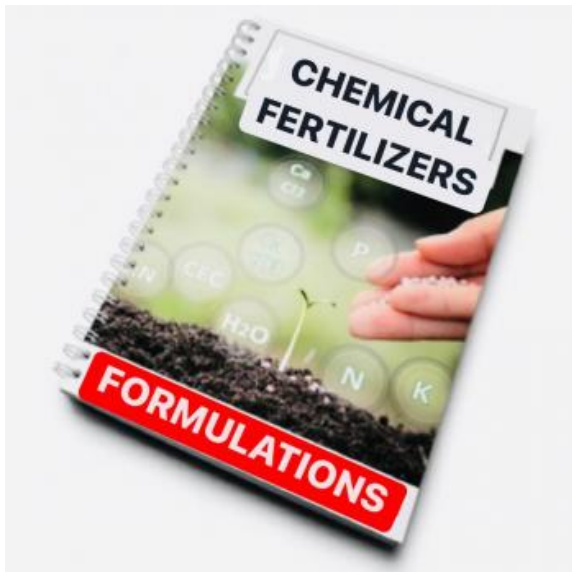

Many organic and chemical fertilizers can be produced by yourself without using any technical machinery and without any technical support.
